

Examples of medical device products in our portfolio:

Surgical equipment components

Ostomy bags for premature babies

Diagnostic drug test kits – molding, decorating and assembly

Vial vent filters – safety precaution for pharmacists

Cups and jars for organ harvesting

Disposable forceps

Luer caps and straps

Tubing connectors and clips

Disposable clamps

Oxygen bushings

IQ – Installation qualification – We ensure that the equipment received matches the specifications we require and ordered, and that it is installed properly.

OQ – Operational qualification – We make sure the equipment runs the way it is supposed to run without material and prior to use in manufacturing.

PQ – Performance qualification – Finally, we test the machinery under load – in the case of a molding machine, this means with the amount of material it should hold, a mold in and running. We make sure that it effectively produces parts that fall within the intended capacity and function designed, and performs to medical qualification standards.

This three-step evaluation process applies to any type of machinery used in our medical manufacturing division.

Rely on ABISMOLD design expertise, medical qualification process experience and lean manufacturing when you need a

seasoned source for plastic injection molded components and assemblies.

Versatility is the distinguishing characteristic of ABIS packaging.

Your product can be shipped to meet market demand including:

Bulk

Single Packs

Three Packs

Seven Packs

Heat Shrink Packs

Flow Wrap

With so many packaging options, preparation for retail sale is easy and economical
